2

$n \log n$

↓ $[10, 3, 2, 5, 4, 8, 6, 7, 33, 53, 10]$

$k=4$

① → $[2, 3, 4, 5, 6, 10, 10, 33, 53, 48, 53]$

min-heap: $O(n)$ ✓

$n + k \log n$ (C) (S) (S) ✓ →
or

max heap

→ $[10, 3, 2, 5]$

② $O(k)$

$k \log k + (n-k) \log k$

$n \log k \rightarrow \text{Time}$

↑ T.com

$K \times \log n \rightarrow [10, 3, 7, 18, 5, 19, 14, 17], K=3$
 1) Sorting $\Rightarrow [3, 4, 5, 7, 10, 14, 18, 19]$ $n \log n$
 $n = 8 - 3$

$O(n) \sim (K-1) \times \log n \Rightarrow K \log n$
